LootChest

Instruction Guide

random spawning fully customizable lootchests with almost unlimited freedom to fill them with loot and lock them with rare keys...

with serverconfig.json

Mod Version : 1.06

by CJ187 and Hunterz

Latest Changes : 30th Nov. 2025

Installation:

Install the mod like every other mod and start the Game with
-mod=@CJ187-Lootchest...
After first time the server will create a Mod-Settings folder at:
DayZServer/profiles/

There you will find the ***CJ_LootChests*** folder with these files inside:
- LootChests_LOG.log
- LootChests_V106.json
- LootChestsTools_V106.json

Lets start with the Config explanations:

LootChest_V106.json:

"EnableDebug": 0,
Toggle Logfiles (0 = minimalized // 1 = detailed).

"DeleteLogs": 0,
Toggle automatic cleaning Logfiles after Restart (0 = dont clean // 1 = clean).

"MaxSpareMags": 3,
Set how much Spare Magazines will be possible when predifinied Weapon will be in LootChest (0-999).

"RandomQuantity": 0,
Toggle random filles items (0 = off // 1 = on)
This will affect all items what have quantity
(food, drinks, loose ammo, magazines, bandages, loose nails, sewing kits, ect...)

Next part **“LootChestsLocations“** will contains all Informations about your Lootchests...

"name": "Police_Station",

Name of the Event (you can name them like you want, but never use same name twice!).

"number": 2,

How many Lootchest you want to spawn in this Event.

"pos": [

"10159.65 248.12 5535.25|73.00 0.00 0.00",
"11171.11 297.69 7665.23|55.00 0.00 0.00",
"13727.68 316.12 8927.63|75.00 0.00 0.00",
"12926.83 10.55 10186.83|22.00 0.00 0.00“
],

all possible Positions with rotations are listed here.
do not set less coordinates than your “number“ of Lootchests!
PLEASE beware correct formatation in this section!!!
"X Y Z|Y P R" without commas between the numbers!!!
If you use more coordinates than your “number“ of Lootchests,
the Lootchests will be spawn random at these coordinates!

"keyclass": "CJ_Key1",

Matching Key to unlock this crate
(If you want an unlocked Lootchest, then you need to choose : "keyclass": "").
Here are only Keys allowed, do not enter other classnames!!!

"openable": 0,

Set how this Lootchest can be opened when it spawn locked:
(0 = key only! / 1 = Key and Lockpick only! / 2 = Key, Lockpick and Tools).

"chest": [

"CJ_LootChest_Grey_Small",
"CJ_LootChest_Grey_Medium",
"CJ_LootChest_Grey_Large"

],

List of possible crates what can spawn on this event.
You can ente ras many Lootchests as you like, the selection will be random for each one.

"lootrandomize": 0.5,

Set the Chance for each Item to NOT spawn in this Lootchest to increase randomization:
Eg.:
0.5 = 50% chance for each Item to NOT be in the Lootchest.
1.0 = 100% chance for each Item to NOT be in the Lootchest. (Chest will be empty)
0.0 = 0% chance for each Item to NOT be in the Lootchest. (all items will be in the Chest)

"light": 0,

Set lightsource inside the opened crate
(0 = no light / 1 = light).

"loot": [

"MP5k",
"Mag_MP5_30Rnd",
"AmmoBox_9x19_25rnd",
"LC_Table_Weapons_Police",
"LC_Table_Magazines_Police",
"LC_Table_Ammo_Police",
"LC_predefined_UMP"
]

List of possible loot inside the *crates…*
you can use *classnames* of items, *LC_Tables* for more randomization and, *LC_predifinied* Weapons.

How Lootchest spawn Items?

The Lootchest will always take all Entrys from this List, depending on the “lootrandomize“ factor…
if you add a „*LC_Table* in this List, the Lootchest will ALWAYS pick ONE random item from this Table!
If you want eg. 5 Items form a specific *LC_Table* , you need to add this one multiple times!
I recomend to add large Items or Weapons in the top section of the list, because these need alot of space!

Next part **“ LCPredefinedWeapons“** will contains all Informations about your already assembled Weapon Presets...

"defname": "LC_predefined_AKM",

Name of Weaponpreset…
*Can be custom but **MUST** beginn with "**LC_predefined_**".*

"weapon": "AKM",

classname of the weapon.
(Must be type Weapon! No Gear!)

"magazine": "Mag_AKM_30Rnd",

classname of magazine in weapon
("magazine": "", = no magazine, eg for Shotguns).

"attachments": [

"AK_FoldingBttstck",
"AK_RailHndgrd",
"UniversalLight",
"AK_Suppressor"
]

classnames of attachments on weapon.
(Only for WeaponAttachments, no Optics!).

"optic": "PSO1Optic",

classname of Optic on weapon
(If you dont want ho have an Optic, use "optic": "")

"optic": "PSO1Optic",

classname of Optic on weapon
(If you dont want ho have an Optic, use "optic": "")

"opticbattery": 1

ONLY when your Weapon have an Optic!
(0 = Weapon have no optic or no Battery in Optic! / 1= Battery inside optic).

Next part **“ LootCategories“** will contains all Informations about your random Loot Tables...

"name": "LC_Table_Tools",

or

"name": "LC_Table_Weapons_Police",

*Tables for more randomization, you can create your custom Tables, they always **MUST** begin with **LC_Table_***

Important: *for all kind of Items, clothing, tools, cosumables you **MUST** use “**LC_Table_** “*

*only for all kind of Firearms you **MUST** use "**LC_Table_Weapons_** "*

"Loot": [

" AKM",

"LC_predefined_AK74",

"LC_predefined_AK101"

],

Loot and Presets in this Table

(choose classnames of items or weapon-presets for custom mounted weapons).

*Each time a Table is added in Lootchest, it will pick **ONE** random Item out o fit!*

LootChestsTools_V106.json:

The last part **" LCTools"** will contains all Informations how the Keys and Tools are working...

Important!

Do not remove any of the Tools or Keys from the Default config!!!
You can not add other Tools without LootChest-Compatibility!

"name": "SledgeHammer",

classname of the tool
(only Sledgehammer, Crowbar and Lockpick are supported!).

"time": 1,

how long in seconds it takes to unlock the LootChest
Only Tools are supported! Keys always need 3 seconds!
(-1 deactivate this option for all LootChests!).

"dmg": 33,

how much damage in % the tool take when you unlocked a Lootchest.
(If you want a Tool or Key be usable only once, set "dmg":100)

"desc": "NAME of KEY|DESCRIPTION of KEY"

here you can change Name and Description of the Keys only!

Important: *You **MUST** use these type of entry: "**name**|**description**"*
So you can customize the Keys to give players hints…

Eg.: *"**Red Key**|This key will open a crate hidden somewhere at the military airfield."*

Now i will give you some **“dirty work-arounds“** to make the mod some kind of more randomness...

Example 1:

You dont want to have each Restart the same amount of Lootchests?

Eg: You have a Building with 5 possible Locations and want 1-3 Lootchests…

Then add 2 more Locations far outside oft he Map boarder, eg “-10000 0 -10000|0 0 0“,

So 2 Chests will have the chance not to spawn inside the Building. So the Players cant be 100% sure to find every time all Chests…

Example 2:

You want have a Table with one very rare item in it and a very low chance to get this item?

Eg: You want to have a Food-Chest with 90% apples and 10% Rice?

Easy! Add in the Table the Apple 9 times and the Rice only once…
